ICR B150

Professional Digital Recorder

The ICR B150 is a second-generation professional digital dictation system, designed to record dictation, meetings and conferences. It provides the next evolutionary step in dictation, by combining the easy and familiar operations of a traditional analogue machine, with the advanced features and versatility of digital technology.

Featuring a stylish metallic silver finish, the **ICR B150** is lightweight and ergonomically designed to fit comfortably in the palm of your hand for hours of dictation, combining good looks with high quality recording and play back.

A file management system stores each recording as a separate file in one of 3 folders allowing the information to be recalled in an instant. An on-board editing facility allows you to review, insert, replace or delete recordings for perfectly drafted dictation.

Recordings are captured using a removable, wear resistant multimedia card. Once complete, download your recordings to a computer where they can be edited, stored, sent by email or played back via external speakers or headset.

Optional Transcription Kit (FSUSB1)

Voice recognition technology has vastly improved with accuracy levels of +95% now a realistic expectation. Integrate the **ICR B150** with most leading voice recognition software packages for an instant voice to text solution. Editing the text produced by voice recognition software couldn't be easier using **Sanyo's PC MemoScriber transcription software** provided with the **ICR B150**.

The **ICR B150** comes complete with a 32Mb multimedia card, providing 1.5 Hours of high quality recording or over 4 hours of long play recording. Extend recording times further using optional 64Mb or 128Mb cards (maximum capacity 17 hours recording).

Features:

- Traditional Four Position Slide Control
- Removable Multimedia memory
- Adjustable Microphone Sensitivity
